

Instructions for installing Zu3D under CC3:

- Login at a workstation as *systemadmin*, and download 'Zu3D CC3 Package' to a temporary location.
- Extract the file 'Zu3D 2.1.006 CC3.zip'
- Copy and paste the folder 'Zu3D' into Q:\Packages\Applications
- In the RM Management Console, expand the 'Workstations' folder, and right-click on 'Main Site'.
- Choose 'Update Package List'. When the process completes, Zu3D is ready to be allocated to your workstations.

To install the audio library, login as *systemadmin* at a workstation with Zu3D installed. Download and run 'Zu3D Audio Library' (ZuSndLib.msi), and let it install to the default path (P:\ZuLogic Ltd\Zu3D\Sound Library\). The audio library will now be available to all Zu3D installations on your CC3 network.

Advanced: Changing the path of the Audio Library

Note, this must be done *before* the package is installed to any workstations, and before installing the sound library.

To change the path of the audio library, open Q:\Packages\Applications\Zu3D\2.1.006.0\ Right click on ZU3D.reg, and choose edit.
Scroll to the bottom of the file, until you see the line:

```
"MediaLibraryDir"="P:\ZuLogic Ltd\Zu3D\SoundLibrary\"
```

Edit this to point to your preferred location, ensuring that double backslashes are used instead of single. Save your changes and close the file.

**NB: These instructions were created for Zu3D CC3 Package Version 2.1.006.0
If you have a different version just replace 2.1.006.0 with your package version where relevant.**
